

Tutorial adicionar colaborador Github

Primeiramente precisamos entrar dentro do repositório que desejamos adicionar o colaborador.

Exemplo: <https://github.com/Antoniosrt/oficina-git-pet-si>

Posteriormente entramos em settings/configuração do repositório.

The screenshot shows the GitHub repository page for 'oficina-git-pet-si' by user 'Antoniosrt'. The 'Settings' tab is selected, displaying the 'General' settings section. The left sidebar contains a navigation menu with options like 'Access', 'Code and automation', 'Security', 'Integrations', and 'Autolink references'. The main content area shows the 'Repository name' as 'oficina-git-pet-si' with a 'Rename' button. Below this are checkboxes for 'Template repository' and 'Require contributors to sign off on web-based commits'. The 'Default branch' is set to 'main'. The 'Social preview' section includes an upload area for a repository image. The 'Features' section is partially visible at the bottom.

Agora entramos na aba de colaboradores no submenu ao lado esquerdo:

 **General**

Access

 Collaborators

 Moderation options 

Code and automation

 Branches

 Tags

 Rules 

 Actions 

Após isso basta clicar em adicionar colaborador e adicionar um novo integrante a partir do seu usuário do github:
